

InfoSec Support and Staff Augmentation Services ▲

Tevora provides an experienced team of security specialists with flexible support hours, extensive security expertise, and industry-leading solutions to help you meet your company's infosec goals.

In today's rapidly evolving economy and threat landscape, having a trusted partner to help you meet your infosec needs can be a lifesaver. Our InfoSec Support and Staff Augmentation Services offer a flexible approach that strengthens your company's security and IT teams when you need it, and can be ramped down when you don't. We can provide onsite or remote services, full-time or part-time, dynamically adapting to your unique and changing needs.

When Tevora partners with your company, we draw on the full breadth and experience of our expert team for each project. This can include a Tevora Project Manager that manages the project budget, builds out and monitors ongoing project plans, and coordinates dispersed resources. We can also assign Security Practice Leads to provide advice and guidance to your technical support staff involved in each project.

Infosec Support & Staff Solutions

Compliance Support

Tevora understands industry and government security regulations and can help you prepare for and successfully complete an assessment.

Virtual CISO

Tevora's top security experts bridge the gap between existing management and technical teams to build and strengthen your company's cybersecurity program.

DevSec Ops

Tevora's Development and Cloud Security Consultants bring security in line with business objectives and build security into the development life cycle.
