

Compliance

3-D Secure

Compliance requirements and security controls are more than just an exercise in compliance box-checking; they are one of the most valuable tools you can use to protect your most valuable assets: intellectual property and consumer information. ▲

What is 3-D Secure?

3-D Secure (3DS) is a security protocol developed by the major payment brands—Visa, MasterCard, American Express, Discover, and JCB—that provides an extra layer of protection for online credit and debit card transactions. By enabling cardholders to authenticate themselves to card issuers when making e-commerce and m-commerce purchases, 3DS reduces merchants' exposure to fraud.

3DS Compliance Requirements

The 3DS standards apply to Core Components used by merchants and banks—Access Control Server, Directory Server, and 3DS Server—as well as System Development Kit (SDK) software used in 3DS mobile applications.

As a certified PCI 3DS Qualified Service Assessor (QSA), Tevora can review your 3DS implementation and help you make any changes needed to comply with 3DS Core Component or SDK requirements. We also prepare the reports required to demonstrate your compliance to the payment brands.

The Road to 3DS Compliance

Tevora's proven compliance program is designed with efficiency in mind. We have perfected our program through years of working as security consultants for some of the largest companies in the world. Tactical and precise, the road to 3DS certification with Tevora is a simple three-step process:

1. Gap Analysis

A tactical gap analysis will go a long way toward outlining strategies for a cost-effective road to 3DS compliance. In addition to scope reduction, we make control validations early on, so remediation efforts can be direct and focused.

2. Remediation

Whether it is writing security policies or implementing security controls to close identified gaps, working hand-in-hand with Tevora QSAs ensures efficient ROI.

3. Assessment

True partners are with you until the end, and Tevora will be there to walk you through the full 3DS compliance assessment process. From review to documentation to submission, Tevora handles all 3DS validation and reporting requirements so you can get back to focusing on what you do best: providing awesome payment products and services to your clients!

Our Purpose

To protect the world from cyberthreats.

About Us

Founded in 2003, Tevora is a specialized management consultancy focused on cybersecurity, risk, and compliance services. Based in Irvine, CA, our experienced consultants are devoted to supporting the CISO in protecting their organization's digital assets. We make it our responsibility to ensure the CISO has the tools and guidance they need to build their departments, so they can prevent and respond to daily threats.

Our expert advisors take the time to learn about each organization's unique pressures and challenges, so we can help identify and execute the best solutions for each case. We take a hands-on approach to each new partnership, and—year after year—apply our cumulative learnings to continually strengthen the company's digital defenses.

Go forward.
We've got your back.

Compliance

We assess, audit, and certify compliance across a comprehensive portfolio of cybersecurity standards.

Enterprise Risk Management

We speak the language of cyber risk and translate it into business impact, giving you rich data to make meaningful decisions.

Data Privacy

We help you craft strategies and plans that work, allowing you to meet the growing demands of domestic and international privacy regulations.

Security Solutions

We help you plan, implement, and integrate cybersecurity products that reduce your risk profile: on-prem, mobile, and in the cloud.

Threat Management

We test your systems, processes, and security with a world-class team of certified hackers and security researchers.

Incident Response

We are a team of first responders, threat hunters, and incident containment specialists working with the latest tools and techniques, ready to serve when your business needs it most.
